

Global Leads Houston in Software Development  
For Immediate Release  
August 3, 2009

### **Global Climbs HBJ Software Developer Listing**

HOUSTON – The [Houston Business Journal](#) ranked [Global Healthcare Alliance](#) (Global) as the fourth largest Houston-based software developer in its June 26 issue. Global provides revenue cycle management services to health care providers and Web-based claims processing software for IPAs and health plans.

The growth of Global's employee base contributed to the company moving up four spots on the annual listing since 2008. Global's employee growth is a direct result of the company's growing client base and commitment to technology innovation.

"As our company grows, we continue to invest in both our people and technology", said John Adams, president and chief executive officer of Global. "We understand that Global plays a vital role in improving the nation's health care system, and that is why we are focused on introducing web-based systems and tools that enhance workflow and increase the speed of the reimbursement to physician practices."

Global's primary Web-based platform is [globalcentara<sup>SM</sup>](#) — the only industry system with Payor-Provider Intelligence<sup>TM</sup>. The system consists of a built-in, rules-based engine that rigorously validates user and system payor/provider rules to increase the efficiency and accuracy of claim submissions and transactions.

Global helps payors and providers reduce overhead expenses, enhance operational efficiencies and decrease the need for manual intervention. Global's user-centric software programs include a digital dashboard that offers a quick glance of key practice metrics and personalized customer service, all designed to enhance business operations.
